

# CCN 19B STUDY

THE CENTER FOR FAMILY PLANNING  
RESEARCH IS CONDUCTING A  
RESEARCH STUDY OF AN  
INVESTIGATIONAL VAGINAL RING

This investigational vaginal ring contains 2 main ingredients

Levonorgestrel: a contraceptive hormone used in many different types of birth control

+

Dapivirine: a drug being studied to prevent HIV

This study will involve 14 visits to Magee-Womens Hospital and up to 4 follow up phone calls over the course of ~6 months

This study will collect information about how these two drugs enter and exit the body

This study does not investigate the ring's ability to prevent pregnancy and HIV

Investigators are working to eventually develop a ring that can prevent both pregnancy and HIV

You may be eligible if you:

- are 18-45 years old
- are using a non-hormonal form of birth control or otherwise not at risk for pregnancy
- have regular menstrual cycles

You will be compensated up to \$875 for completing all study procedures
